

**Solaiemes unveils the LiveServe MediaServer product completing the IMS based product line “LiveServe VideoShare Suite 1.0”. 26/08/07.**

Madrid. Solaiemes unveils the LiveServe MediaServer. This MediaServer is designed to stream video in the VideoShare standard codecs and bit rates enabling “server to mobile” VideoShare mobile solutions.

The LS MediaServer includes external APIs (Licensable) to send request and verify/verify transactions status to be included in third party systems building customized mobile solutions.

Together with ConverG (the IMS AS and/or VideoShare host) and LiveServe “mobile-to-server” solutions enabler the LS MediaServer completes our IMS product infrastructure line “LiveServe VideoShare Suite 1.0”. The suite is the flexible framework commercially available to build combining the servers compelling mobile solutions. The suite is flexible, scalable and available to carriers / third parties to create new use cases and new models of carrier revenues as ASP of private core infrastructure.

The suite infrastructure entitles MVNOs to build early stage customized advanced services to selected customers with minimum infrastructure and new models of revenue generation.

Related to the Suite, Solaiemes offers integration services to carriers and third parties, training to potential deployment partners and full service of design, implementation and validation of proof of concept service trials to mobile carriers.

**About Solaiemes.**

Solaiemes is a technology company focused on Mobility, creating value in two ways, creating more use cases for mobility, and increasing usability of mobile side. Solaiemes pioneers in SIP/IMS solutions and use of SVG technologies to enhance usability. Also, offering know-how as mobile consultants. [www.solaiemes.com](http://www.solaiemes.com)
